

KIVI councils

In the past, several councils in KIVI were tasked with formulating opinion and advice on certain topics that touch the wider society. These councils consist of highly experienced individuals active in (Applied) Universities, large corporations and politics.

As the YKE board, we would like to reach out to you and ask if there are young engineers interested in participating in such boards. We think it is very important to activate our members and to allow them the opportunities to contribute to societal topics and to grab hold of opportunities to grow!

There are two boards with open two open positions each for Young KIVI Engineers:

- 1) The KIVI Council Science, Engineering & Society (Dutch: Wetenschap, Techniek en Maatschappij)
- 2) The KIVI Council Education (Dutch: Opleiding)

Council (1) will focus on political topics that touch technology and engineering, communication in and towards the media regarding KIVI's position on these topics and advising KIVI internally. A clear interest and affinity for politics is desired!

Council (2) will focus on national and EU-wide educational topics and Chartered Engineering. Naturally, educational interest and experience is desired here.

Please reach out to us at yke@kivi.nl if you are interested. We think it is very important for Young Engineers to get opportunities like these, so let's take them!
